# In the future do you think we should use nuclear power or renewables? What are the impacts of your diet? Should we all use electric cars?

The Global Calculator is an interactive tool that allows you to answer these types of questions by letting you explore the wide range of options to reduce emissions.

With the Global Calculator you can see that it is possible to improve people's standards of living and prevent dangerous climate change by meeting the 2°C target.

## How can I use it?

Anyone can learn more about what mitigation options make a real difference and the impacts of their lifestyles:

- Learn more about energy, land, food and climate issues, and how they interact.
- Understand how sectors will evolve at a global level to a low carbon 2050 and which markets could grow in the future.
- Help inform internal strategies and campaigns.
- Useful in determining whether country plans are aligned with a global 2°C pathway.
- Discover what technologies and actions we need in the future.

## How can I access it?

Visit [www.globalcalculator.org](http://www.globalcalculator.org) to access the tool, videos and guidance for free. You can also download a summary of the Global Calculator's findings.
